

# Cybersecurity Incident Response Plan (CSIRP) 2-Day On-site Workshop

**Cybersecurity threats are real - can you afford the risk of not being prepared for security breach?  
Do you have an incident response plan? Is the plan realistic? Are you ready?**

To support you and help your organization mitigate such risks, Circumference has developed a 2-day onsite workshop led by an Incident Response Planning team, experts in risk mitigation recovery. This workshop utilizes a rapid proven methodology, helping your team build an incident response plan to suit your organization. This plan identifies the appropriate controls and roles ensuring uninterrupted business that continues to meet its mission critical requirement.

While on-site, the Circumference Incident Response Planning team rapidly integrates with your organization to review its systems, requirements and overall compliance. The team determines and prioritizes risks to mission critical security breaches, collaborates on related emerging developments that can impact it, and ensures compliance to relevant regulations. The outcome of this workshop is an executive plan that includes a contingency sequence of assignments and activities. It ensures controls are restored promptly, and all necessary actions are taken to update stakeholders, measure the impact and manage the incident. It is a customized incident response plan that delivers a comprehensive guide for your organization, to proactively recover from security breach incidents.

During 2 consecutive days, the Circumference team facilitates and documents the Cybersecurity incidence Response Plan. The team is made of three professionals: a certified Security Specialist, a Senior Systems Analyst, and a System Scribe. Details of the 2-day workshop are listed in the table below:

| Day | Time | Topic                  | Description   |
